🐙 AllTerrainWHALE

Personal Profile

Recent BSc Computer Science graduate, specialising in Artificial Intelligence, with proficient experience in the Python language and hands-on experience in building machine learning models in coursework and personal projects. Enthusiastic to expand upon my current knowledge base to explore deeper into the power of AI, using strong algorithmic foundations, problem-solving skills, and a collaborative mindset to contribute as an entry-level AI engineer.

Education

University of Sussex *BSc in Computer Science with Artificial Intelligence* *Sept. 2022 – May 2025*

- **Grade:** First Class
- **Modules:** Natural Language Engineering, Computer Vision, Acquired Intelligence & Adaptive Behaviour, Knowledge & Reasoning, Neural Networks.

Haydon School *GCSEs and A-Levels* *Sept. 2015 – July 2022*

- **A-Level:** Computer Science, Maths, Physics
- **GCSE:** 8 subjects, grades 7 - 5

Projects

ACS Network Generator *Sole-developer*

[!\[\]\(4b7a79268f6ba26c1471d4232fffa85a_img.jpg\) ACS-Network-Generator](#)

- Developed a simulated ant model to mimic foraging behaviours, allowing agents to form pheromone trails chaining multiple food nodes together, making use of only two unique pheromones.
- 95% success rate in ant agents were capable of fully developing a pheromone network.
- Tools Used: Python, PyTorch, NumPy, CUDA/Numba

Applying Cascaded Regression Based Face Alignment *Sole-developer*

- Developed a face alignment tool for identifying eyes and mouth features from a given image.
- Successfully trained a cascade regressor, with 90% accuracy, to estimate the location of the desired features, using a scoring and trimming technique to eliminate regressors that negatively impacted the final alignment.
- Tools Used: Python, OpenCV, NumPy

World Conquest Game *Group project - group leader*

[!\[\]\(56549452e01ca28bdf2500ced9653143_img.jpg\) World-Conquest](#)

- Created an online game similar to the classic board game “Risk”.
- Developed the “attack phase” of the game for players to use cards, attack into territories, and roll dice.
- Integrated all phases of the game to make them all work together and form a fully functional game.
- Tools Used: C#, Unity, Blender

Technologies

Languages: Python, C#, JavaScript, HTML/CSS, PHP, Java

Frameworks: PyTorch, NumPy, CUDA/Numba, .NET, RESTful, Node.js, Bootstrap

Developer Tools: Git & GitHub, VS Code, Visual Studio, Unity, Blender, Google Sheets

Skills: Project Management, Artificial Intelligence, Back-end Development, Project Planning

Skills & Achievements

- Received black belt in Taekwondo in *Sept. 2019*
- Hub winner for Engineers without Borders Global Design Challenge 2023
